

ENVIRONMENTAL POLICY

Typhoon International have a pledge to operate in a manner which minimises the impact of its business operations on the environment, to help protect the oceans that we all cherish.

How our products are changing.

Over the years, Typhoon have always considered the environmental impact of their products and production processes and where possible have used sustainably sourced materials. We are now starting to incorporate the use of Solvent Free Glues into the manufacture of various neoprenes, which is completely water-based and free from Organic Solvents and Volatile Organic Compounds, this can result in 600g of solvents/VOCs being eliminated per wetsuit that is manufactured. We have also introduced a range of products which are knitted using polyester yarn made from recycled plastic bottles, this helps reduce waste and material consumption. We will continue to build upon this over the next few seasons to become greener.

Recyclable packaging

Typhoon is committed to minimise single-use plastics in packaging where there is an alternative, sustainable solution, working towards a 75% reduction over the next 3 years, we also remain committed to shipping customer orders in previously used packaging whenever possible. We have made significant improvements to our product packaging and going forward all new products in our leisure range will use either 100% recyclable kraft card or FSC approved card qualities for outer packaging and plastic bags are being replaced with a range of sustainable alternatives: LDPE recyclable poly bags, bio-degradable poly bags or fabric reusable bags, this enables us to remove any single use plastics from new products going forwards, which is a big step on the road to becoming greener.

The day-to-day stuff

We have an established recycling system for office waste including paper, old catalogues, aluminium cans, plastic packaging/drinks bottles, food packaging, food waste, etc. Whilst in our warehouse we always recycle/re-use suitable packaging received from supplier deliveries. We also work with a waste management service provider to sort and separate recyclable materials from our general waste collections to divert waste from landfill.

Typhoon is committed to ensuring all policies and processes are compliant with the latest relevant legislation and regulations also to keep up to date and ensure any changes are acted upon.

Working with our suppliers

We are continuously working alongside our suppliers to introduce more sustainable and recyclable products and packaging options for our products reducing packaging waste where possible

How you can help

As a Typhoon customer, please help us to recycle any packaging responsibly.

A handwritten signature in black ink, appearing to read "Kevin Coulthard", is positioned above the printed name.
