Climate Change Policy

1. Introduction

Typhoon International Ltd recognises the significant impact of climate change and is committed to addressing it within the framework of our Integrated Management System (IMS) in accordance with ISO 9001/14001 standards. This policy outlines our dedication to identifying, assessing, and mitigating the risks and opportunities associated with climate change to enhance the resilience and sustainability of our operations.

2. Scope

This Climate Change Policy applies to all aspects of Typhoon International Ltd.'s operations, including but not limited to product design, installation, maintenance, procurement, and customer service.

3. Determination of Relevance

Typhoon International Ltd acknowledges the importance of determining whether climate change is a relevant issue within the context of our IMS. We will assess the potential impacts of climate change on our ability to consistently provide products and services that meet customer requirements and regulatory standards and enhance customer satisfaction. ***See Appendix 1 Climate Change Relevance Assessment and Audit Framework for Typhoon International Ltd***

4. Identification of Interested Parties

Typhoon International Ltd recognises the importance of identifying relevant interested parties and their requirements related to climate change. Interested parties may include customers, regulatory authorities, suppliers, employees, and community groups. We will engage with these interested parties to understand their expectations and incorporate their requirements into our approach to addressing climate change.

5. Compliance with ISO 9001 Standards

Typhoon International Ltd is committed to complying with the requirements of ISO 9001/14001: Integrated Management Systems. We will integrate climate change considerations into our IMS processes to ensure alignment with ISO 9001/14001 standards while addressing the risks and opportunities associated with climate change.

6. Internal Auditing

Typhoon International Ltd will conduct regular internal audits of our IMS to assess compliance with ISO 9001/14001 standards and the effectiveness of our approach to addressing climate change. Internal audits will be conducted by trained personnel who are independent of the areas being audited and have received appropriate training in auditing techniques and ISO 9001/14001 requirements.

7. Continuous Improvement

Typhoon International Ltd is committed to continuously improving our IMS and our approach to addressing climate change through:
Implementing corrective actions to address non-conformities identified during internal audits.
Identifying opportunities for improvement and implementing preventive actions to address potential risks associated with climate change.
Monitoring the results of internal audits and using them as a basis for setting objectives and targets for improvement.

8. Communication and Stakeholder Engagement

Typhoon International Ltd will communicate our Climate Change Policy to all employees, contractors, suppliers, and other relevant stakeholders. We will engage with our stakeholders to solicit feedback, address concerns, and promote transparency in our approach to addressing climate change.

9. Documentation and Record Keeping

Typhoon International Ltd will maintain documented information related to our Climate Change Policy, including policy statements, internal audit reports, corrective action plans, and records of follow-up actions taken to address audit findings.

Appendix 1,

Climate Change Relevance Assessment and Audit Framework for Typhoon International Ltd

1) Direct Impacts on Operations:
Have we experienced any weather-related disruptions or incidents in the past due to climate change (e.g., flooding, extreme temperatures, storms)?
Are there any changes in energy consumption patterns or costs associated with climate change-related factors (e.g., increased demand for cooling during heatwaves)?
Have there been any disruptions in the supply chain due to climate-related events (e.g., delays in delivery of materials)?

2) Regulatory Compliance:
Are there any regulatory requirements related to climate change that directly affect our operations (e.g., emissions regulations, energy efficiency standards)?
Have we conducted a review of relevant legislation and regulations related to climate change, environmental protection, and sustainability?

3) Customer and Stakeholder Expectations:
Have our customers expressed any concerns or requirements related to climate change, sustainability, or environmental responsibility?
Are there any contractual obligations with customers or stakeholders regarding climate change mitigation, carbon footprint reduction, or environmental performance reporting?

4) Supply Chain Resilience:
Have we assessed the vulnerability of our supply chain to climate-related risks (e.g., disruptions in raw material supply due to extreme weather events)?
Are there any measures in place to ensure the resilience and sustainability of our supply chain in the face of climate change impacts?

5) Risk Assessment and Mitigation:
Have we conducted a risk assessment to identify potential climate change-related risks and opportunities to our business (e.g., risks of increased insurance premiums, opportunities for innovation in energy-efficient products)?
Are there mitigation measures in place to address identified risks and capitalise on opportunities related to climate change?

6) Monitoring and Reporting:
Do we have systems in place to monitor and track our environmental performance, including greenhouse gas emissions, energy consumption, and waste generation?
Are we transparent in reporting our climate change-related initiatives, targets, and achievements to stakeholders, including customers, regulators, and the public?

7) Continuous Improvement:
Do we regularly review and update our climate change strategy and action plans in response to changing regulatory requirements, stakeholder expectations, and emerging risks and opportunities?
Are climate change considerations integrated into our overall business strategy and decision-making processes?

8) For audit traceability, ensure that:
Documentation is maintained for each step of the assessment process, including records of data sources, analysis methods, findings, and decisions taken.
Audit trails are established to track the implementation of climate change-related initiatives, actions, and improvements over time.
Internal audit procedures include specific criteria and indicators for evaluating the effectiveness of climate change management practices and compliance with relevant standards and regulations.
Audit findings and recommendations related to climate change are documented and communicated to relevant stakeholders for corrective action and continuous improvement.
